compare PRRSY susceptibility factors between individual swine. They can also be used to modulate viral RNA (especially PRRSY RNA) entry into cells by altering CD 151 amounts in cells. Polynucleotides may be included in plasmids useful to render a cell line susceptible to PRRSY infection, useful to produce non-simian lines for drug testing. They may be included in vectors and used to integrate CD 151 into a chromosome. They can also be used to produce transformed cell lines, useful e.g. to diagnose PRRSY infection in swine herds or produce vaccines for inducing immunity against PRRSY. This sequence represents a primer used to isolate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to novel DNA and polypeptide sequences (ISU-55) of a porcine reproductive and respiratory syndrome virus (FRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can be used to induce and respiratory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Porcine Reproductive and Respiratory Syndrome Virus (PRRSV) DNA sequences

AAT79997-T80016 represent amplification primers for ORFs 1b-7 of porcine reproductive and respiratory syndrome virus (PRRSV). The amplified sequences can be used in the polymucleotides of the invention. PRRSV is a new and severe disease in swine, characterised by reproductive failure in some and guilts, pneumonia in young growing pigs, and an increase in perevasing mortality. However, there are marked diferences in pathogenicity between iolates (with ISU3927 being the least virulent pathogenicity between iolates (with ISU3927 being the least virulent isolate known). The genomic organisation of PRRSV resembles coronaviruses and toroviruses, in that their replication involves the formation of a 3 coterminal nested set of subgenomic mRNNs. ORPS 5, 6, and 7 encode a glycosylated membrane protein, an unglycosylated membrane protein, and an enclecaspid protein, respectively. ORPS 2 to 4 encode proteins with the characteristics of membrane associated proteins. The polymucleotides of the invention, encode a protein that is at least 88%, but less than 100% homologous to one of proteins encoded by one of the ORPs of these sequences. The polymucleotides of the ORPs of these sequences. The polymucleotides of the invention, and their encoded polymetrides can be used in a vaccine to protect a pig against PRRSV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

AAT79997-T80016 represent amplification primers for ORFs 1b-7 of porcine reproductive and respiratory syndrome virus (PRRSV). The amplified sequences can be used in the polynucleotides of the invention. PRRSV is a new and severe disease in swine, characterised by reproductive failure in sows and guilts, pneumonia in young growing pigs, and an increase in prewearing mortality. However, there are marked diferences in pathogenicity between iolates (with ISU327) being the least virulent isolate known). The genomic organisation of PRRSV resembles coronaviruses and toroviruses, in that their replication involves the formation of a 3' coterminal nested set of subgenomic mRNAB. ORFS 5, 6, and 7 encode a clycosylated membrane protein, an unglycosylated membrane protein, an unglycosylated membrane associated proteins. The polynucleotides of the invention, encode a protein that is at least 88*, but less than 100* homologous to one of proteins encoded by one of the ORFS of these polynucleotides of the invention, and their encoded proteins and polympetides can be used in a vaccine to protect a pig against PRRSV. Antibodies raised against the polypoptides can be used to treat a pig suffering from PRRSV, and to assay for a PRRSV
                                                                                                                                                                                                                                                                           Porcine reproductive and respiratory syndrome virus; PRRSV; coronavirus; reproductive failure; pneumonia; pig; preweaning mortality; torovirus; subgenomic mRNA; glycosylated membrane protein; nucleocapaid protein; membrane associated protein; vaccine; antibody; therapy; primer; amplify; polymerase chain reaction; PCR; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Porcine reproductive and respiratory syndrome virus DNA sequences - useful for diagnosis, treatment and prevention of infection in pigs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 18 BP; 3 A; 4 C; 7 G; 4 T; 0 U; 0 Other;

AAT79997-T80016 represent amplification primers for ORFs 1b-7 of porcine reproductive and respiratory syndrome virus (PRRSV). The amplified sequences can be used in the polymucleotides of the invention. PRRSV is a new and severe disease in swine, characterised by reproductive failure in sows and guilts, pneumonia in young growing pigs, and an increase in preventing mortality. However, there are marked diferences in pathogenicity between iolates (with ISUJ37 being the least virulent isolate known). The genomic organisation of PRRSV resembles coronaviruses and toxoviruses, in that their replication involves the formation of a 3. coterminal nested set of subgenomic mRNAs. ORPS 5, 6, and 7 encode a glycosylated membrane protein, an unglycosylated membrane protein, an unglycosylated membrane protein, tespectively. ORFS 2 to 4 encode proteins with the characteristics of membrane associated proteins. The polymucleotides of the invention, encode a protein that is at least 88*, but less than 100* homologous to one of proteins encoded by one of the ORFs of these sequences. The polymucleotides of the invention, and their encoded polympetides can be used in a vaccine to protect a pig against PRRSV. Antibodie raised against the polymetrides can be used in a vaccine to protect a pig against PRSV.
                                                                                                                                                                      Porcine reproductive and respiratory syndrome virus, PRRSV, coronavirus, reproductive failure, pneumonia, pig, prewaning mortality, torovirus, subgenomic mRNA; glycosylated membrane protein; nucleocapsid protein; membrane associated protein; vaccine; antibody; therapy; primer; amplify;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAT79997-T80016 represent amplification primers for ORFs 1b-7 of porcine reproductive and respiratory syndrome virus (PRRSV). The amplified reproductive and respiratory syndrome virus (PRRSV). The amplified sequences can be used in the polynucleotides of the invention. PRRSV is a new and severe disease in swine, characterised by reproductive failure in sows and guilts, pneumonia in young growing pigs, and an increase in preweating mortality. However, there are marked diferences in pathogenicity between iolates (with ISU327 being the least virulent solate known). The genomic organisation of PRRSV resembles coronaviruses and toroviruses, in that their replication involves the formation of a 3' coterminal nested set of subgenomic mRNAs. ORFS 5, 6 and 7 encode a glycosylated membrane protein, an unglycosylated membrane protein, an unglycosylated membrane associated proteins. The polynucleotides of the invention, encode a protein that is at least 88*, but less than 100% characteristics of membrane associated by one of the ORFs of these sequences. The polynucleotides of the invention, and their encoded colynocial protein and the invention, and their encoded colynocial protein and the polypoptides can be used in a vaccine to protect a pig against PRRSV. Suffering from PRRSV, and to assay for a PRRSV
                                                                                                                                                                        Porcine reproductive and respiratory syndrome virus; PRRSV; coronavirus; reproductive failure; pneumonia; pig; preweaning mortality; torovirus; subgenomic mRNA; glycosylated membrane protein; nucleocapsid protein; membrane associated protein; vaccine; antibody; therapy; primer; amplify; polymerase chain reaction; PCR; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           useful for diagnosis, treatment and prevention of infection in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Porcine reproductive and respiratory syndrome virus DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 18; DB 1; Length 18;

```
The present invention describes a nucleic acid which encodes a polymerase from an RNA virus, excluding porcine reproductive and respiratory syndrome virus (PREN), and open reading frames (ORFs) 2-7 of PREN. The use of a polymerase gene from KNA viruses can provide for production of less mutagenic recombinant viruses. The recombinant viruses can be used in vaccines which have a reduced risk of loss or reduction of efficacy. The vaccines are used particularly for protecting swine against PRES. The high fidelity RNA polymerase gene can be used as a marker that allows organisms naturally infected with wild type strains of virus or other vaccines. The present sequence represents a PCR primer used in an example
                                                                                                                                                                      New recombinant porcine reproductive and respiratory syndrome virus -containing nucleic acid encoding a polymerase from an RNA virus and open reading frames 2-7 of the porcine virus, used particularly in vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        porcine reproductive and respiratory syndrome virus; PRRSV; antiviral; immunoprotective; vaccine; ISU-55; porcine reproductive and respiratory disease; PCR; primer; ss.

This invention relates to novel DNA and polypeptide sequences (ISU-55) of a porcine reproductive and respiratory syndrome virus (PRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can be used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can be used to induce

                                                                                                                                                                                                                                                                                                                                                                 Porcine Reproductive and Respiratory Syndrome Virus (PRRSV) DNA sequences and protein products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     a porcline reproductive and respiratory syndrome virus (PRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can be used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can be used to induce antibodies in pigs.

Porcine Reproductive and Respiratory Syndrome Virus (PRRSV) DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention relates to novel DNA and polypeptide sequences (ISU-55) of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       a porcine reproductive and respiratory syndrome virus (PRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can be used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can antibodies in pigs.
                                                                                                      porcine reproductive and respiratory syndrome virus; PRRSV; antiviral; immunoprotective; vaccine; ISU-55; porcine reproductive and respiratory disease; PCR; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            porcine reproductive and respiratory syndrome virus; PRRSV; antiviral;
                                                                      Porcine reproductive and respiratory syndrome virus PCR primer 33.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Porcine reproductive and respiratory syndrome virus PCR primer 50.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immunoprotective; vaccine; ISU-55;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to novel DNA and polypeptide sequences (ISU-55) of a porcine reproductive and respiratory syndrome virus (PRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can antibodies in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Porcine Reproductive and Respiratory Syndrome Virus (PRRSV) DNA sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                       This invention relates to novel DNA and polypeptide sequences (ISU-55) of a porcine reproductive and respiratory syndrome virus (PRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can be used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can antibodies in pigs.
                                                                                                                    Porcine Reproductive and Respiratory Syndrome Virus (PRRSV) DNA sequences and protein products.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antilipemic; cardiant; vasotropic; antiarteriosclerotic; antidiabetic; cytostatic; anticonvuleant; nootropic; muscula; anti-HIV; RNA interference; iRNA; antisense technology; lipid metabolism; cholesterol imbalance; dyslipidaemia hypercholesterolaemia; coronary artery disease; CAD; coronary heart disease; CHD; atherosclerosis; hepatic glucose production; glucose-metabolism-related disorder; disease; cancer; breast cancer; colon cancer; lung cancer; auviological disease; Huntington disease; spinocerebellar ataxia; viral disease; AIDS; apolipoprotein B; apoB; ss.

The invention describes a RNA interference (IRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical 2'-O alkyl modifications, the antisense come or more asymmetrical phosphorothicate modifications and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (II); and the antisense sequence targets a human gene sequence. Also described constraints or glucose-6-phosphatase levels in a subject; producing (I); introducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (II) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of apoB-100, elevated or otherwise unwanted cortering from a disorder characterised by elevated or otherwise unwanted cortesion of apoB-100, elevated or otherwise unwanted cortesion of apose or cortesion or inhalance, dyslipidaemias, oronary activity or disceptual cortesion or for treating glucose-metabolism. The contact disease (CHD) and atherosclerosis. (I) is administered to a subject to inhalated diseases as mentioned above, cancer (e-g) breast, colon or contrating plud acterioral disease as mentioned above, cancer (e-g) breast, colon or contrating plud acterioral disease (e-g). Huntington disease or spinocerebellar attaxia) or viral disease (e-g). Huntington disease or spinocerebellar elevated or otherwise unwanted contaction or spinocerebellar ele
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   artery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antilipemic; cardiant; vasotropic; antiarteriosclerotic; antidiabetic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Interference RNA agent useful for treating dyslipidemias, coronary disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The invention describes a RNA interference (iRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical phosphorothicate modifications and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described care: a pharmaceutical preparation comprising (I); reducing (MI) apoB-100 levels or glucose-6-phosphatase levels in a subject; producing (I); incolves selecting a sequence with activity and circulation decreases nuclease sensitivity while not decreasing its introducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (II) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.

Conseful for reducing apoB-100 levels or glucose-6-phosphatase levels.

Confervise unwanted expression of apoB-100, elevated or otherwise unwanted confervated or disorder is cholesterol, and/or disregulation of Ilpid metabolism. The disorder is chosen from the HDL/LDL cholesterol imbalance, dyslipidaemias, hypercholesterolaemia, tatain-resistant chypercholesterolaemia, coronary hartery disease (CHD) and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-metabolism.

Conferving the diseases as mentioned above, cancer (e.g. breast, colon or treating the diseases as mentioned above, cancer (e.g. breast, colon or lung cancer), neurological disease (e.g., Huntington disease or spinocerbellar ataxia) or viral disease (e.g., AIDS). This sequence represents a human apolipoprotein B (ABOB) antisense origonical disease or repersonners or sequence Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications. coronary artery disease; CAD; coronary heart disease; CHD; atherosclerosis; hepatic glucose production; glucose-metabolism-related disorder; disbetes; cancer; bung cancer; lung cancer; neurological disease; Huntington disease; spinocerebellar ataxia; viral disease; ADDS; apolipoprotein B; apoB; ss. cholesterol imbalance; dyslipidaemia hypercholesterolaemia; Example 5; SEQ ID NO 5287; 378pp; English. 12-MAR-2003; 2003US-0454265P.

Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications. The invention describes a RNA interference (IRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical 2'-O alkyl modifications, the antisense sequences have one or more asymmetrical phosphorothioate modifications and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (MI) apoB-100 levels or glucose-6-phosphatase levels in a subject; producing (I); antilipemic; cardiant; vasotropic; antiarteriosclerotic; antidiabetic; cytostatic; anticonvulsant; nootropic; muscula; anti-HIV; RNA interference; iRNA; antisense technology; lipid metabolism; cholesterol imbalance; dyslipidaemia hypercholesterolaemia; coronary artery disease; CAD; coronary heart disease; CHD; atheroselerosis; hepatic glucose production; glucose-metabolism-related disorder; diabetes; cancer; breast cancer; colon cancer; lung cancer; aurological disease; Huntington disease; spinocerebellar ataxia; viral disease; AIDS; apolipoprotein B; apoB; ss. Human apolipoprotein B (ApoB) oligonucleotide seqid 2615. The invention describes a RNA interference (IRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical phosphorothicate modifications comports and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described compared to a pharmaceutical proparation comprising (I); reducing (II); involves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition of II. (I) is useful for reducing apob-100 levels or glucose-6-phosphatase levels.

Cuseful for reducing apob-100 levels or glucose-6-phosphatase levels.

The subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of apob-100, elevated or otherwise unwanted concerned and a descreases of the cash in the precedure of a disorder is chostserol and/or disregulation of Iipid metabolism. The disorder is chostserolaemia, coronary artery disease (CAD), coronary heart cyllogate production or for treating glucose-metabolism.

Culmibit hepatic glucose production or for treating glucose-metabolism.

Culmibit hepatic glucose production or for treating glucose-metabolism.

Culmibit hepatic glucose production or for treating glucose-metabolism.

Culmipated diseases as mentioned above, cancer (e.g. breast, colon or lung cancer), neurological disease (e.g., AIDS). This sequence of phinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence of the production of a post of the programment of the production of a post of the programment of the production of the production of a post of the produced of the
                                                                                                                                                                                                                                         Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

```
The invention relates to a recombinant avipox virus (e.g. canarypox virus) comprising a DNA complementary to genomic RNA from porcine reproductive and respiratory syndrome virus (PRRSV). Also included are an immunological composition for inducing an immunological response in a host, comprising a carrier and at least one recombinant avipox virus, a vaccine against PRRS comprising a recombinant avipox virus and a carrier and a pig vaccine composition comprising at least one other vaccine against one other pig pathogen. Compositions comprising the recombinant virus is useful for inducing immunological response against PRRSV gene products, and for treating or preventing diseases caused by porcine reproductive and respiratory syndrome virus. The present sequence is a CRR primer used to clone the PRRSV ORF 2 (open reading frame 2) into publis (resulting in puplis), a canarypox virus vector where the C6L open reading frame is deleted and replaced with a multiple cloning site.
                                                                                                                                                                                                                                                                                                                                                                                                             recombinant avipox virus comprising a DNA complementary to genomic from porcine reproductive and respiratory syndrome virus (PRRSV), ful for inducing immune response against, and treating or preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           American PRRS virus; Nidovirales virus; pig; swine; vaccine;

The present sequence is that of a PCR primer complementary to nucleotides 14981-14999 within ORF7 of the North American porcine reproductive and respiratory syndrome (PRRS) virus P129A genome (see AAA27809). The primer was used in a PCR process for the deletion of ORF4 (membrane glycoprotein gene) from the North American PRSS virus genome. This genetically modified virus was used as a replication-defective vaccine. The invention relates to polymucleotide molecules, plasmids, viral vectors and transfected host cells that comprise North American PRRS DNA. It also relates to polymucleotide molecules, viral vectors and transfected host cells encoding a genetically modified North American PRRS virus that is disabled in its ability to cause PRRS, or which encodes 1 or more betterologous antigenic epitopes, for use as a vaccine. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                       New polynucleotide encoding an infectious RNA molecule of a North
American porcine reproductive and respiratory syndrome virus for use as a
vaccine in protecting swine and other animals from infection by a

ORF-5 (AAT14390) was amplified using 2 other primers (AAT14398-99) and ORF-6 (AAT14391) using 2 further primers (AAT14400-01). Amplified fragments were cloned into baculovirus transfer vector pyll393 and used for prodn. of recombinant Iowa strain infectious agent proteins (ORF-7 products, see also AAR94701-03) in Hi-Pive insect cells. These proteins can be used in subunit vaccines against
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Porcine reproductive and respiratory syndrome virus; PRRSV; vaccine; antigen; baculovirus; vector; Hi-Five; insect; polymerase chain reaction;
                                             The sequences given in AAQ63585-90 are primers which were used in the amplification of ORF-5, ORF-6 and ORF-7 of the infectious agent associated with the Iowa strain of porcine respiratory and reproductive syndrome, termed ISU-12. The isolated ISU-12 sequence may be used to infect cells and from these, the vaccine of the invention can be produced. This vaccine may be used for protecting pigs against a porcine respiratory and reproductive disease (PRRD). Antibodies to the vaccine may also be used in treating PRRD and for assaying for the virus. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New porcine reproductive and respiratory syndrome virus DNA - and proteins encoded by open reading frames of an Iowa strain of the virus; are used in vaccines against PRRSV in pigs.

The method comprises determining the genotype of an affected individual with at least one polymorphic marker localised within the chromosomal region defined by and including markers D185843 and D185869 and determining the genotype associated with increased susceptibility to MD disorder. The method can be used for determining susceptibility to MD disorder. The bipolar disorder, genetic counselling of individuals from families affected with MD lilness, and aid in the differential disagnosis of MD illness from other psychiatric pathologies. Products from the present invention can also be used to obtain modulators of IMP.18p myo- inositol monophosphatase procein activity and as targets for preventive and therapeutic treatments. The present search are and the mapping of human chromosome 18 for determining the genotype of MD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated IMP.18p myo-inositol monophosphatase - used to develop products for determining susceptibility to manic depressive illness and as targets for preventive and therapeutic treatments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    illness susceptibility, used in an example from the present invention

Porcine Reproductive and Respiratory Syndrome Virus (PRRSV) DNA sequences
                                                                                                                                                                                                                                                                                                                                      The invention relates to new strains of M. hyorhinis that are causative agents for autoimmune disease. The M. hyorhinis nucleic acids are useful for preparing a composition for diagnosing or treating an animal with systemic sclerosis, e.g. mouse, rat, dog, cat, pig, sheep, goat, cow, horse, human or bird. Sequences ACFS459-67 represent M. hyorhinis nucleic acid sequences that are good targets for ribozymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    porcine reproductive and respiratory syndrome virus; PRRSV; antiviral; immunoprotective; vaccine; ISU-55; porcine reproductive and respiratory disease; PCR; primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Porcine Reproductive and Respiratory Syndrome Virus (PRRSV) DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to novel DNA and polypeptide sequences (ISU-55) of a porcine reproductive and respiratory syndrome virus (PRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can be used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can antibodies in pigs.

                                                                                               This invention relates to novel DNA and polypeptide sequences (ISU-55) of a porcine reproductive and respiratory syndrome virus (PRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can be used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can be used to induce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    reproductive and respiratory syndrome virus; PRRSV; antiviral;

The nucleic acid sequences are useful as pharmaceutical agents for treating conditions such as chronic obstructive bulmonary disease (CDPD), chronic bronchitis, asthma, cystic fibrosis, obstructive bowel syndrome and any other diseases or conditions that are related to or will respond to the levels of CLCA1 in a cell or tissue. The sequences are useful for reducing CLCA1 activity in a cell, hence, are useful for treatment of a patient having a condition the use of one or more therapies under conditions gassociated with the level of CLCA1, where the invention further comprises the use of one or more therapies under conditions suitable for the treatment, for example, oxygen therapy, bronchodilators, corticosereoids, antibacterials, vaccinations, acetylcysteine and mucokinetic agents. The nucleic acids of the invention are also used as diagnostic tools to
                                                                                                                                                                                                                                                                                                                                                                              Human; chloride channel calcium activated 1; CLCA1; ss; antiasthmatic; antilifilammatory; chronic obstructive pulmonary disease; COPD; asthma; chronic bronchitis; cystic fibrosis; obstructive bowel syndrome; oxygen therapy; bronchodilator; corticosteroid; vaccination; mucokinetic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Enzymatic polynucleotide that down regulates expression of chloride channel calcium activated gene, useful for treating Chronic obstructive pulmonary disease (COPD), chronic bronchitis and asthma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                examine genetic drift and mutations within diseased cells or to detect
the presence of CLCA1 RNA in a cell. This sequence represents an

This invention relates to novel DNA and polypeptide sequences (ISU-55) of a porcine reproductive and respiratory syndrome virus (PRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can be used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can antibodies in pigs.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in multiwell plates numbered for discrimination are mixed in each of the multiwell plates (b) a primer designed based on the chromosome marker multiwell plates (c) a signal corresponding to the marker is detected from the resultant complified product to specify the discrimination Nos. of the multiwell plates containing the clones having said marker sequence; (d) the order of the maximum in the specified discrimination Nos. acray the multiwell complates; (e) the clones in the multiwell plates of the specified discrimination Nos. to array the multiwell complates; (e) the clones in the multiwell plates of the specified discrimination Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the constituted as the positions on the chromosome and arrayed. The clones are reconstituted as the positions on the chromosome and arrayed. The clones are constituted as the positions on the chromosome and arrayed. The constituted as the man chromosome and arrayed. The correspondence of plates are specified for mine analysis. The invention relates to a biocompatible implant (I) comprising a biological molecule, and a support. (I) is useful for producing medicament for treating injured site within a body or for producing medicament for reinforcement of an organ or tissue within a body. A device containing (I) is useful for treating an injured site of a body. reinforcing an organ or tissue within a body, producing or regenerating within a body, and medicament for treating an injured site within a body. In an example a biocompatible implant is placed in rats with a bubstance to treat myocardial infarctions. After treatment, the rat hearts were extracted and expression analysis of cardiac genes and their controls were carried out by PCR. This sequence represents a primer to determine the level of expression of the alpha-major histocompatibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Primers given in AAQ89224-25 are based on the mouse delta opioid receptor third transmembrane domain and third cytoplasmic loop, respectively. They were used to amplify cDNA from a rat brain library. Amplified cDNA was used to screen the library further, and a clone encoding a rat mu opioid receptor (AAR71964) was isolated. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequences were determined from the ends of chromosome 11-specific cosmids by automated sequencing without intermediate subcloning.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This nucleotide sequence comprises the intron 21-exon 22 boundary of the human JAGGED1 gene. 47 Intron/exon boundaries have been defined (see AAX06701-47) by comparison of genomic sequences from bacterial artificial chromosome 49D9 and an isolated cDNA clone (see AAX63753). Exon 22 corresponds to nucleotides 2986-3095 of the hJAGGED1 cDNA. hJAGGED1 (see also AAW87894) is a Notch ligand capable of inhibiting the differentiation of hamatopoietic progenitor cells. Mutation of the hJAGGED1 gene is associated with Alagille syndrome. The Jagged1 gene has
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New Jagged peptides for inhibiting differentiation of progenitor cells also used for maintaining these cells in undifferentiated state, e.g. for haematopoietic reconstitution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

              for STS primer prediction by computer analysis (using the "Primer" program available from E.Lander, MIT). The STSs and cosmids were mapped by in situ hybridisation, somatic cell hybrid analysis or both. Using this method, 370 STSs specific for human chromosome 11 were generated and most of them were regionally mapped. This procedure illustrates a novel method for sequence sampled mapping method is useful for the completion of high density sequence-based maps, and ultimately, for the complete sequencing of genomic DNA directly from cosmid clones. See AAQB2001-082706 for STS primers. (Updated on 25-WAR-2003 to correct PN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A method for the analysis of cDNA comprises (a) preparing an aggregate of double-stranded cDNAs by using an aggregate of ENBSEQ files AAQ75547-Q75798) labelled reverse transcription primers (ENBSEQ files AAQ75547-Q75798) and using the aggregate of mKNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Analysis of cDNA and gene expression - by amplification of mRNA followed
DNA sequence fragments were determined and of these, 277 were suitable
                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pck primers AAAS9501-02 were used to amplify cDNA clones encoding rat mu opicid receptor protein. The primers are based on murine sequences. The specification also describes a transcription regulatory polypeptide and an opicid receptor-like polypeptide. Human mu opicid receptor polypeptide and opicid receptor openies are useful as a source of probes and primers, which may be used as diagnostic tools to detect normal and abnormal DNA sequences in DNA derived from patients cells. They are also used as a means for detecting and isolating other members of the polypeptide family and related polypeptides from a DNA library potentially containing such sequences. The polymucleotide is used for preparing large quantities of opicid receptor which on expression in microorganism can be useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Complementary nucleic acid detection method related sequence #5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 21;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3; Indels

The invention relates to a recombinant vector for expressing a heterologous peptide at the amino-terminus of a potyvirus cost protein (CP). The vector includes sufficient potyvirus nucleic acid sequence to permit viral replication and spread within a plant infected by the vector. The invention also relates to Zucchini yellow mosaic potyvirus (ZYWV) AGII strain CP and its corresponding nucleic acid sequence. The recombinant vector is useful for translently expressing a portion of the heterologous peptide in a plant. It is also useful for infecting a cucurbit fruit, is useful as a source of material for vaccination, pharmacceutical or disgnostic application. The present sequence is a his paramaceutide encoding DNA. The peptide is used to fuse to the N-terminus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Identifying a candidate polymorphic repeat within a coding sequence, for understanding or treating genetic disease, comprises detecting tandem
                                                                                                               Novel recombinant vector useful for transiently expressing heterologous peptide in plant comprises potyvirus nucleic acid sequence and heterologous sequence inserted at amino terminus of potyvirus coat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EST; expressed sequence tag; ss; polymorphic repeat; tandem repeat; polymorphic marker prediction of ubiquitous simple sequences; POMPOUS; Rep-X; human; genetic disease; drug-treatment; Machado-Joseph; Haw River syndrome; Huntington's disease; fragile-X syndrome; Fredreich's ataxis; myotonic dystrophy; hyperandrogenaemia; spinal atrophy; bulbar atrophy; spinocerebellar ataxia.

sequences which can be used to detect single nucleotide polymorphisms (SNPB). The DNA sequences of the invention are useful for detecting SNPs existing in human genes and for the diagnosis of human disease. The present DNA sequence represents a human gene PCR primer of the invention. The invention comprises isolated human gene sequences and PCR primer Sequence 21 BP; 0 A; 9 C; 3 G; 9 T; 0 U; 0 Other; 11-DEC-2001; 2001JP-00377637. 11-DEC-2001; 2001JP-00377637 85.78; Human gene PCR primer #1268 ADH94423 standard; DNA; 21 (first entry) Conservative WPI; 2003-819215/77 Local Similarity JP2003174883-A. The computational methods (polymorphic marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are useful for identifying and detecting candidate polymorphic repeats in human genes, which can be used to understand, treat or eliminate genetic diseases, predispositions or adverse drug-treatment reactions. Examples of diseases linked to nucleotide repeats are Machado-Joseph, Haw River
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Polynucleotide for detecting single nucleotide polymorphisms existing in human gene, contains isolated human gene having specified sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                syndrome, Huntington's disease, fragile-X syndrome, Fredreich's ataxis, myotonic dystrophy, hyperandrogensemia, spinal and bulbar atrophy and spinocerebellar ataxia. The sequences presented in ABX79676-ABX800022 are the polymorphic repeats identified for a search of human ESTs

The siRNAs of the invention are useful for reducing hair loss in a mammal which involves contacting several mammal's hair cells with the siRNA, where the siRNA interferes with the translation of mRNA of the androgen signal transduction protein. The siRNAs are useful for treating hyperandrogenic conditions of androgenic alopecia, including male pattern alopecia, acne vulgaris, sebortroea, and female hirsutism and prostatic hypertrophy. The present sequence is a target sequence which was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel small interfering RNAB (siRNAB), comprising a double stranded RNA, where one strand comprises a partial nucleic acid sequence of an androgen signal transduction pathway protein, and where the double-stranded RNA inhibits translation of mRNA encoding the nucleic acid sequence of the androgen signal transduction pathway protein thereby blocking the androgen signal transduction pathway. The androgen signal transduction pathway protein is chosen from isozymes I and II of 5-alpha reductase (ADQ92425 and ADQ92516), the androgen receptor (ADQ92571), aromatase (ADQ92896), 3-alpha-hydroxysteroiddehydrogenase (ADQ93182), 3-beta-hydroxysteroiddehydrogenase (ADQ93360), 3-beta-hydroxysteroiddehydrogenase (ADQ93360), 3-beta-hydroxysteroiddehydrogenase (ADQ9361), 17-beta-hydroxysteroiddehydrogenase-4--isomerase (ADQ93511), 17-beta-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Inhibitory nucleic acid that inhibits expression of an androgen signal transduction pathway protein useful for treating hair loss, comprises a double stranded RNA having a partial sequence encoding a pathway protein
                                                                                                                                                                                                                                                                                                                                                                                                 Endocrine; Antiseborrheic; Dermatological; Depilatory; RNA interference;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to novel small interfering RNAB (siRNAB), comprising a double stranded RNA, where one strand comprises a partial nucleic acid sequence of an androgen signal transduction pathway procein, and where the double-stranded RNA inhibite translation of mRNA encoding the nucleic acid sequence of the androgen signal transduction pathway. The protein thereby blocking the androgen signal transduction pathway. The androgen signal transduction pathway protein is chosen from isozymes I and I of 5-alpha reductase (AD092896), 3-alpha-
and I of 5-alpha reductase (AD092896), 3-alpha-
thydroxysteroiddehydrogenase (AD093182), 3-beta-
hydroxysteroiddehydrogenase (AD093182), 3-beta-
hydroxysteroiddehydrogenase (AD093182), and steroid sulfacase hydroxysteroiddehydrogenase (AD093182), and steroid sulfacase hydroxysteroiddehydrogenase-4-5-isomerase (AD093541), 17-beta-
hydroxysteroiddehydrogenase-6-5-isomerase (AD093541), 17-beta-
hydroxysteroiddehydrogenase-6-6-isomerase (AD093541), 17-beta-
hydroxysteroiddehydrogenase-6-6-isomerase (AD093541), 17-beta-
hydroxysteroiddehydrogenase-6-6-isomerase (AD093770). The siRNAB of the invention are useful for reducing hair loss
in a mammal which involves contacting several mammal's hair cells with
candrogen signal transduction protein. The siRNABs are useful for treating
hyperandrogenic conditions of androgenic alopecia, including male pattern
alopecia, acne vulgaris, seborrhoea, and female hirsutism and prostatic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Primer DP966 (AAT14404) is specific to porcine reproductive and respiratory syndrome virus (PRRSV). It was used with other sequencing primers (AAT14381-82) to determine the sequences of the putative membrane (M) and nucleocapsid (N) genes of PRRSV isolate ISU-12 (see also AAT14391-92) and of 5 other American PRRSV isolates (AAT14405-09) and European
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New porcine reproductive and respiratory syndrome virus DNA - and proteins encoded by open reading frames of an Iowa strain of the virus; are used in vaccines against PRRSV in pigs.
hypertrophy. The present sequence is the antisense strand for one such siRNs of the invention.

The invention relates to enzymatic nucleic acid molecules that down regulate expression of chloride channel calcium activated 1 (CLCA1) genes by cleaving RNA derived from the genes. The nucleic acid sequences are useful as pharmaceutical agents for treating conditions such as chronic obstructive pulmonary disease (COPD), chronic bronchitis, asthma, cystic clibrosis, obstructive bowel syndrome and any other diseases or conditions that are related to or will respond to the levels of CLCA1 in a cell or tissue. The sequences are useful for reducing CLCA1 activity in a cell, hence, are useful for treatment of a patient having a condition associated with the level of CLCA1, where the invention further comprises the use of one or more therapies under conditions suitable for the treatment, for example, oxygen therapy, bronchodilators, corticosteroids, antibacterials, vaccinations, acetylcysteine and mucokinetic agents. The nucleic acids of the invention are also used as diagnostic tools to examine genetic drift and mutations within diseased cells or to detect the presence of CLCA1 RNA in a cell. This sequence represents an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to enzymatic nucleic acid molecules that down regulate expression of chloride channel calcium activated 1 (CLCA1) genes by cleaving RNA derived from the genes. The nucleic acid sequences are useful as pharmaceutical agents for treating conditions such as chronic obstructive pulmonary disease (COPD), chronic bronchitis, asthma, cystic fibrosis, obstructive bowel syndrome and any other diseases or conditions that are related to or will respond to the levels of CLCA1 in a cell or tissue. The sequences are useful for reducing CLCA1 activity in a cell, hence, are useful for treatment of a patient having a condition associated with the level of CLCA1, where the invention further comprises the use of one or more therapies under conditions suitable for the treatment, for example, oxygen therapy, bronchodilators, corticosteroids, antibacterials, vaccinations, acetylcysteine and mucokinetic agents. The nucleic acids of the invention are also used as diagnostic tools to examine genetic drift and mutations within diseased cells or to detect the presence of CLCA1 RNA in a cell. This sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

```
The present invention describes a Streptomyces sp. cyclic lipopeptide acylase. The cyclic lipopeptide acylase gene and its expressed cyclic lipopeptide acylase are useful in deacylation of the amino group in the acylamino group of a side-chain in a cyclic lipopeptide acylases are obtainable by genetic modification, have comparable acylase are obtainable by genetic modification, have culture time on large scale. The present and can be produced in shorter for the Streptomyces sp. cyclic lipopeptide acylase, which is used in an example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Oryza minuta Pi9 locus nucleotide binding site (NBS) gene PCR primer #63.
                                                                                                                                                                                                                                                                                                                                                                                                                   Gene encoding cyclic lipopeptide acylase genetically engineered to give vectors and transformants for expression of protein with comparable acylase activity in shorter culture time on large scale.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nucleotide binding site; NBS; Pi9 gene; bacterial blight; rice blast; plant breeding; transgenic plant; Plant; PCR; primer; ss.

The polypeptides of the invention may be of use in treating these 1547 GCAGCAGAAGAGAAGAAG 1565 2 gcagcagcagaaaggaag 20 ch 0.8%; il Similarity 89.5%; 17; Conservative A; 3 C; 8 œ Sequence 20 BP; GEST ) GENSET WO9928475-A2 27-NOV-1998; 04-NOV-1998; 28-NOV-1997; 07-OCT-1999 .7-DEC-1997; 10-JUN-1999 Griffais R; AAZ03935; diseases Query Match diseases Local RESULT 125 Matches AAZ03935 ន្តដូនូ ò 음 ö The invention comprises the amino acid and coding sequences of nucleotide binding site (NBS) proteins from the Oryza minuta Pi9 locus (bacterial blight and rice blast resistance genes). The DNA sequences may be used as markers for resistance to infection with manaporthe grisea in plant breeding programs. The present DNA sequence represents a PCR primer for Vaccine; eye disease; conventional trachoma; nonendemic trachoma; paratrachoma; inclusion conjunctivitis; genital disease; perihepatitis; nongonococcal uretritis; epidymitis; cervicitis; salpingitis; PCR primer; bartholinitis; pneumopathy; venereal lymphogranulomatosis; ss. PCR primers AAZ01426-Z06209 were used to amplify open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). These ORFs encode polypeptides (see AAX36754-X37949) which can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epital diseases such as nongonococcal uretritis, epital also promeumopathy in breast feeding infants; and venereal lymphogranulomatosis. leic acids encoding nucleotide binding site (NBS) proteins NBS1, NBS2 NBS3, useful for producing plants resistant to Magnaporthe grisea Gaps ö 0.8%; Score 15.8; DB 1; Length 19; 89.5%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PCR primers AAZ01426-Z06209 were used to amplify open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). These ORFs encode polypeptides (see AAX36754-Y37949) which can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; gential diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis, pneumopathy in breast feeding infants; and venereal lymphogranulomatosis. The polypeptides of the invention may be of use in treating these
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..

Methionine aminopeptidase 2 (also known as MetAP2 and eukaryotic initiation factor [eIF-2] associated protein, p67) is a cellular glycoprotein that promotes protein synthesis in the presence of active IF-2 kinases by protecting the eIF-2 alpha subunit from phosphorylation. The present invention relates to antisense oligonucleotides (AAC67690-C67767) which inhibit human methionine aminopeptidase 2 coding sequence expression (see AAC67683). The present sequence is one such antisense oligonucleotide. The present sequence is one such antisense oligonucleotide. The present sequence is one such antisense oligonucleotide naving or being prone to a disease or condition associated with expression of MetAP2. In addition, the present sequence can also be used as research reagents, diagnostics and to distinguish between functions of various members of a biological pathway. The antisense functions of further be used prophylactically, e.g. to prevent or delay infection, inflammation or tumour formation. Note: the present can sequence may have a phosphorothioate backbone and 2-methoxyethyl (2'-MOE)
                                                                                                                                                                                                                                                                                                                                      New antisense compounds which specifically hybridize with and inhibit human methionine aminopeptidase 2 expression, useful for treating methionine aminopeptidase 2 related disorders and preventing inflammation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; PCR; primer; ss; interferon beta; IFN beta; virucide; cytostatic; antinflammatory; antiulcer; neuroprotective; glycosylation; single chain multimeric interferon beta; cytokine; antiviral; antiproliferative; immunomodulatory; type I interferon; viral infection; cancer; tumour; tumour angiogenesis; carcinoma; cervical dysplasia; Crohn's disease; ulcerative colitis; Guillain-Barre syndrome; glioma; idiopathic pulmonary fibrosis; leukaemia; multiple myeloma; Hodgkin's disease; multiple sclerosis; hepatitis; herpes; interferon la; interferon lb; gene therapy; dimer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antiinflammatory; cytostatic; antibacterial; methionine aminopeptidase 2; hibhibitor; MetAB2; eukaryotic initiation factor associated protein; p67; e1F-2; protein synthesis; antisense oligonucleotide; infection; human; inflammation; tumour; phosphorothioate; 2-methoxyethyl wing; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence was used in a method for predicting susceptibility to generalised onset periodontal disease. The method comprises detecting genetic polymorphisms in the interleukin (IL) lalpha (IA) or lbeta (IB) genes. The high risk genotypes are those where the individual is homozygous for allele 1 for IL-1A or for IL-1B. The method allows early monitoring and therapeutic intervention of generalised onset periodontal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Predicting or diagnosing (susceptibility to) early-onset periodontal disease comprises detecting genetic polymorphisms of interleukin 1B.
                                                                                                                                                                                                                                                                                                                Generalised onset periodontal disease; interleukin-lalpha; IL-1A; interleukin-1beta; IL-1B; polymorphism; disease diagnosis; ss.

The invention relates to a new cell capable of producing recombinant human lysosomal alpha-mannosidase (rhilaMaN). The cell comprises the 3066 bp EcoRI-XDaI fragment of a human cDNA which codes for a human LAMAN protein in which the position corresponding to position 186 of the full length hilaMaN protein is Aspartic acid. The rhilaMaN produced by the method cited above, is useful for the preparation of a medicament for the treatment of alpha mannosidosis. They can also be used in the diagnosis, clinical evaluation and detection of a lapha mannosidosis. The present sequence represents a vector primer for sequencing the human hilaMaN cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New cell capable of producing recombinant human lysosomal alpha-mannosidase, useful for the diagnosis, clinical evaluation and detection, and preparation of a medicament for the treatment of alpha mannosidosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 20 BP; 3 A; 5 C; 5 G; 7 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention discloses a single chain multimeric interferon beta polypeptide comprising two monomers linked through a peptide bond or a composition to the monomers is an interferon beta monomer context and an interferon beta monomer interferon beta monomer context cannot cythines characterised by antiviral, antiproliferative and interferons are important cytokines characterised by antiviral, antiproliferative and interferons. The single chain multimeric interferon beta and interferons. The single chain multimeric interferon beta compositions containing the polypeptide and/or compositions containing the polypeptide are useful for treating viral infections, cancers, tumours or tumour anglogenesis, carcinomas, cervical dysplasia, Crohn's disease, ulcerative colitis, carcinomas, cervical dysplasia, Crohn's disease, ulcerative colitis, carcinomas, cervical dysplasia, Crohn's disease, ulcerative colitis, callulamina multiple myeloma, Hodgkin's disease, abnormal cell growth and immunomodulation in any suitable animal. The polypeptide and/or inmerferon la or 1b. Nucleic acid encoding the polypeptide and/or interferon la or 1b. Nucleic acid encoding the polypeptide have a number compositions are also useful for treating the above mentioned conditions. The polypeptide or a conjugate comprising the polypeptide have a number confirmant in vivo half-life, increased serum half-life, reduced immunogenicity and/or increased bioavailability. Thus use of the polypeptide, or conjugate, provides longer duration between injections, cantibodies. The sequence presented is the mutant PCR primer, CBProFprIO2, which was used (with ABK88087) to construct the first monomer of a human contract the first
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Single chain multimeric interferon (IFN) beta polypeptide for treating e.g. viral infections, comprises two linked monomers, where one monomer is IFN beta monomer with an introduced glycosylation site.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

primers (AAT14402-03). Amplified fragments were cloned into baculovirus transfer vector pVL1393 and used for prodn. of recombinant Iowa strain infectious agent proteins (ORF5-7 productes, see also AAR94701-03) in Hi-Five insect cells. These proteins can be used in subunit vaccines against PRRSV in pigs. Primer AAT14400 was also used with primer AAT14403 to amplify the putative M and N genes of PRRSV isolates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Porcine Reproductive and Respiratory Syndrome Virus (PRRSV) DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to novel DNA and polypeptide sequences (ISU-55) of a porcine reproductive and respiratory syndrome virus (PRRSV). The invention may allow development of compounds with antiviral or immunoprotective activity or a vaccine. The ISU-55 polypeptides can be used to induce antibodies against PRRSV effective to induce the antibodies in a pig. Compositions comprising the ISU-55 polypeptides can be used as vaccines to protect pigs from a porcine reproductive and respiratory disease. The ISU-55 polypeptides can antibodies in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               porcine reproductive and respiratory syndrome virus; PRRSV; antiviral; immunoprotective; vaccine; ISU-55; porcine reproductive and respiratory disease; PCR; primer; 88.

This invention relates to novel methods of screening to identify epigenetically silenced genes. Specifically, it refers to the detection of epigenetically silenced tumour suppressor genes in cancer cells, which are transcriptionally inactive due to aberrant methylation at normally unmethylated CpG islands. Accordingly, these genes provide diagnostic markers for immortalised and transformed cells and hence can be used to diagnose various proliferative disorders, particularly oesophageal cancer and head and neck cancer. The present invention describes a genomic screening method to identify silenced genes in a cell suspected of a predisposition to, or exhibiting, unregulated growth. Accordingly, oligonuclectides of the genes identified herein are useful for detecting oesophageal squamous cell carcinoma (ESCC) or neck squamous cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying at least one epigenetically silenced gene associated with cancer useful for treating cancer comprises contacting an array of genome with nucleic acid molecule that reactivates expression of epigenetically
                                                                                                                                                  Human RT-PCR primer to amplify an epigenetically silenced gene (SeqID62).
                                                                                                                                                                                   human; primer; RT-PCR; PCR; ss; epigenetically silenced gene; tumour suppressor; cancer; proliferative disorder; head and neck cancer; oesophageal squamous cell carcinoma; ESCC; gene therapy; methyltransferase inhibitor; 5Aza-dC; histone deacetylase inhibitor.

RESULT 133
ADF75382/c
```

carcinoma. Furthermore, treatment can occur via gene therapy, using a demethylation agent such as a methyltransferase inhibitor (5Aza-dC) or a histone deacetylase inhibitor to restore expression of at least one methylation silenced gene in cancer cells. This oligonucleotide sequence is an RT-PCR primer used to amplify those genes that were up-regulated as a result of treatment with a demethylation agent i.e epigenetically

comprises

Claim 93; SEQ ID NO 274; 217pp; English.

The present invention describes a method for detecting a cancer cell in a subject. The method comprises determining the level of expression of a cobing agene in a sample of the subject where elevated expression of the gene is indicative of a primary cancer or its micrometastasis or metastasis. Also described: (1) an isolated GOBLIN mucleic acid molecule; (2) a vector comprising the isolated mucleic acid of (1); (3) a monoclonal or polyclonal antibody that binds specifically to a GOBLIN polypeptide, or its immunogenic epitope; (5) a fusion protein comprising the isolated polypeptide of (4); (6) a method of identifying a compound that raduces or antagonises expression of a GOBLIN gene; (7) a process for identifying or determining and producing a compound; (8) an isolated nucleic acid that antagonises expression of a GOBLIN gene, where the nucleic acid comprises a nucleotide sequence comprising any of the 21 bp sequences of SEQ ID NOS:46-353; (9) an isolated antisens nucleic acid comprises expression of a GOBLIN gene, where the nucleic acid comprises expression of a GOBLIN gene, where the nucleic acid comprises or expression of a GOBLIN gene, where the nucleic acid comprises or efficacy of treatment of a cancer in a subject. GOBLIN sequences have efficacy of treatment of a cancer in a subject. GOBLIN sequences have conclisted mucleic acid molecule can be used for producing an antibody. The solated GOBLIN polypeptide can be used for producing an antibody. The method, nucleic acid molecules and the encoded polypeptides, and

```
antibodies can be used for detecting a cancer, e.g. squamous cell carcinoma, hepatocellular carcinoma, melanoma, head and neck cancer, adenocarcinoma, gastrointestinal cancer (e.g. gastric, colon, or pancreatic cancer), renal cell cancer, blader cancer, prostate cancer, non-squamous carcinoma, glioblastoma, medullablastoma, ovarian cancer, e.g. basal cell carcinoma, clear cell carcinoma, endometrioid ovarian cancer, or mucinous ovarian cancer), or breast cancer (e.g. lobular lesion, stromal lesion, ductal carcinoma, ductal adenocarcinoma, proliferative fibrocystic change, epitheliosis, intraductal papilloma, or atypical ductal hyperplasia) in a subject. The antagonist of GOBLIN function, method, and compound are useful for treating hyperproliferative disease, like cancer. The present sequence represente a small interfering RNA (siRNA) oligonucleotide targeted to human GOBLIN, which is used in
                                                                                                                                                                                                                                                                                                                                                                                                                                   the exemplification of the present invention.

Enzymatic polynucleotide that down regulates expression of chloride channel calcium activated gene, useful for treating Chronic obstructive pulmonary disease (COPD), chronic bronchitis and asthma.

Claim 4; Page 64; 152pp; English.

The invention relates to enzymatic nucleic acid molecules that down regulate expression of chloride channel calcium activated 1 (CLCA1) genes by cleaving RNA derived from the genes. The nucleic acid sequences are useful as pharmaceutical agents for treating conditions such as chronic obstructive pulmonary disease (COPD), chronic bronchitis, asthma, cystic fibrosis, obstructive bowel syndrome and any other diseases or conditions

```
ö
that are related to or will respond to the levels of CLCA1 in a cell or tissue. The sequences are useful for reducing CLCA1 activity in a cell, hence, are useful for treatment of a patient having a condition associated with the level of CLCA1, where the invention further comprises the use of one or more therapies under conditions suitable for the treatment, for example, oxygen therapy, bronchodilators, corticosteroids, antibacterials, vaccinations, acetylcystelms and mucokinetic agents. The nucleic acids of the invention are also used as diagnostic tools to examine genetic drift and mutations within diseased cells or to detect the presence of CLCA1 RNA in a cell. This sequence represents an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel short interfering RNA (siRNA) nucleic acid molecule, that modulates expression of a nucleic acid molecule encoding HBR2, K-Ras, H-Ras, N-Ras, human immunodeficiency virus (HIV) or a component of HIV. The nucleic acid molecule acid molecule of the invention has cytostatic, anti-HIV, and anti-rheumatic activity. The nucleic acid molecules are useful for reducing HBR2, K-Ras, H-Ras, and HIV acid molecules are useful for reducing hBR2, K-Ras, H-Ras, and HIV activity in a cell. The nucleic acids are also useful for treating breast, ovarian, colorectal, lung, prostate, bladder, or pancreatic cancer, and HIV infection, and AIDS. The sequences shown in ABZ55389 - ABZ65216, ABZ65531, ABZ65531, ABZ65520 - ABZ65524, ABZ65531.

```
This sequence represents a PCR primer used to amplify Escherichia coli genomic DNA. The primer is used in an example of a method for determining analyte in a sample using the particles of the invention. The invention relates to particles (I) containing a compound (II) and a fluorescent compound (III). Compound II reacts with singlet oxygen to form a metastable intermediate that can decompose with simultaneous or usubsequent emission of light. The fluorescent compound (III) is excited by activated compound (II) and emits at a wavelength longer than the emission wavelength of compound (II). The particles are useful in specific binding assays. The assays can be used to determine antigens or haptens, e.g. blood group or HLA antigens or bacterial, fungal, protozoal or viral antigens, other proteins e.g. immunoglobulins, cytokines, or viral antigens, cancer markers or intritional markers, microorganisms, drugs, metabolites, pesticides, pollutants or polynucleotides. The longer emission wavelength of [III) eliminates interference from serum
                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Particles containing a chemiluminescent donor and a fluorescent acceptor are useful in specific binding assays to determine antigens, haptens, enzymes, hormones, cancer markers or nutritional markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    when the particles are used in specific binding assays in the

This sequence represents a PCR primer used to amplify Escherichia coli genomic DNA. The primer is used in an example of the assay of the invention relates to a homogeneous assay for determining an analyte, comprising combining medium suspected of containing an analyte with a label reagent, and intrinsically metastable species, and determining the reaction. The label reagent comprises a suspended particle and a specific binding pair (8bp) member associated with a photochemically activatable chemiluminescent compound (PACC), the subpotochemically activatable chemiluminescent compound (PACC), the subpot capable of binding to the analyte. The metastable species is capable of binding to the analyte. The metastable species is PACC, when brought into close proximity by the presence or absence of the analyte. The method can be used to determine antigens or haptens, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Homogeneous specific binding assay, e.g. for proteins or nucleic acids, uses photochemically activatable chemiluminescent compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        blood group or HLA antigens or bacterial, fungal, protozoal or viral antigens, other proteins e.g. immunoglobuline, cytckines, enzymes, hormones, cancer markers or nutritional markers, microorganisms, drugs metabolites, pesticides, pollutants or polynucleotides. The method is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

 The present invention relates to short interfering nucleic acid (siNA) that downregulates expression of a multidrug resistance (MDR; P-Glycoprotein) gene by RNA interference, modulating expression of MDR genes in cells, tissue explants or organisms by introduction of siNA; kits for in vitro or in vivo delivery of siNA; conjugates and/or complexes of siNA; and vectors that express siNA. The method relates to the modulation (inhibition) of expression or activity of MDR by RNA interference, siNA target mRNA, pre-RNA and/or RNA templates. siNA are transcriptionally modified RNA, pre-RNA and/or RNA templates. siNA are consented to modulate expression of MDR genes, in cells, tissue explants or organisms, e.g. for treating multidrug-resistant cancers but also for drug screening; diagnosis; target identification and validation; genetic engineering; pharmacogenomics; studying gene function and gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence represents the upper strand of human MDR targeted double stranded siNA which is identical to the MDR transcript target sequence.
                                                                                                                  short interfering nucleic acid; siNA; multidrug resistance; MDR; P-glycoprotein; Cytostatic; cancer; drug screening; genetic engineering; pharmacogenomics; gene mapping; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       New short interfering nucleic acid, useful e.g. for treatment and diagnosis of cancers, downregulates expression of the multidrug
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0.8%; Score 15.4; DB 1; Length 19;

resistance gene.

```
The present invention relates to short interfering nucleic acid (siNA) that downregulates expression of a multidrug resistance (MDR; P-Glycoprotein) gene by RNA interference, modulating expression of MDR genes in cells, tissue explants or organisms by introduction of siNA; complexes of siNA; and vectors that express siNA. The method relates to the modulation (inhibition) of expression or activity of MDR by RNA interference, siNA target mRNA, RNA splice variants, post-transcriptionally modified RNA, pre-RNA and/or RNA templates siNA are used to modulate expression of MDR genes; in cells, tissue explants or organisms, e.g. for treating multidrug-resistant cancers but also for cramarogenomics; target identification and validation; genetic engineering; pharmacogenomics; studying gene function and gene mapping (e.g. of single-nucleotide polymorphisms). The present sequence represents the lower strand of human MDR targeted double stranded siNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

treating the diseases as mentioned above, cancer (e.g. breast, colon or lung cancer), neurological disease (e.g., Huntington disease or spinocerbellar ataxia) or viral disease (e.g., AIDS). This sequence represents a hepatitis C virus (HCW) antisense oligonucleotide that can be used to control HCV gene expression.

## (ALNY-) ALNYLAM PHARM.

Bumcrot D; Manoharan M,

WPI; 2004-677362/66.

Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.

Example 5; SEQ ID NO 5847; 378pp; English.

sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical 2'-O alkyl modifications, the antisense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical phosphorothioste modifications and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (1); reducing (M1) apo8-100 consistences-sphosphatase levels in a subject; producing (II); crabilising (I), involves selecting a sequence with activity and controducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is useful for reducing apo8-100 levels or glucose-6-phosphatase levels. (M1) is useful for reducing apo8-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or cherwise unwanted depresent of apo8-100, elevated or otherwise unwanted control and/or disregulation of lipid metabolism. The discretize chosen from the HDL/LL cholesterol imbalance, dyslamant, coronary heart control disease (CMD) and atherosclerosis (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-metabolisminvention describes a RNA interference (iRNA) agent (I) comprising

AAX91991-X97517 represent PCR primers used to amplify open reading frames and other nucleic acid sequences from the genome of Chlamydia pneumoniae (See AAX91990). C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAX34584- AAX35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae succied as immunogenic compositions, especially where the vector directs the expression of a neutralising
                                                                                                                                                                                                             Respiratory disease; pneumonia; bronchitis; heart disease; sarcoidosis; sinusitis; purulent otitis media; erythema nodosum; pharyngitis; vaccine; neutralising epitope; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0.8%; Score 15.4; DB 1; Length 20;

The invention relates to an isolated polypeptide, comprising a variant form of mouse or human SAC1 polypeptide. The variant form is associated with altered preference for carbohydrates, other sweeteners or ethanol.

The polypeptide and its associated DNA sequence can be produced by recombinant techniques and is useful for preventing obesity, diabetes or alcoholism associated with SAC1 expression. The sequences are useful in screening for drugs and sweeteners. Recombinant cell lines and transgenic embryos may be used in screening for and identifying agents that induce or repress function of SAC1. Predisposition to diabetes, obseity or alcoholism can be ascertained by testing any fluid or tissue of a human (such as blood, pancreas or tongue) for sequence variations of the SAC1 can alcoholism and may provide a diagnostion to diabetes, obesity and/or alcoholism and may provide a diagnostion to diabetes, obesity and/or alcoholism and may provide a diagnostic mark. The polynucleotide can be detected in a biological sample by contacting the DNA with a probe to form a hybridisation complex and the second or sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel isolated polypeptide comprising variant form of mouse or human SAC1 polypeptide, and is associated with altered preference for carbohydrates or other sweeteners, useful for preventing obesity, diabetes, alcoholism.
                                                                                                                                                                                                                                                                                             Human; mouse; SAC1; carbohydrate; sweetener; ethanol; alcoholism; ss;

ö The present invention relates to antisense compounds targeted to a nucleic acid encoding human PLML phospholemman-like protein expressed in breast tumours). The antisense compound comprises an antisense oligonucleotide that specifically hybridises with the nucleic acid and inhibits the expression of PLML. The antisense oligonucleotide is a chimeric oligonucleotide. The antisense oligonucleotide comprises at least one modified internucleoside linkage, preferably a phosphorothicate linkage. It also comprises at least one modified sugar moiety, preferably a 2'-O-methoxyethyl (2'-MOE) sugar moiety. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcytosine. The antisense oligonucleotides are useful for the treatment of infection, inflammation, and tumours. The present sequence represents an antisense oligonucleotide used in the examples of the New antisense oligonucleotides encoding phospholemman-like protein expressed in breast tumors (PLML), useful for diagnosing, preventing or treating diseases associated with PLML, e.g. infection, inflammation or tumors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to antisense compounds targeted to a nucleic acid encoding human PLML phospholemman-like protein expressed in breast tumours). The antisense compound comprises an antisense oligonuclectide that specifically hybridises with the nucleic acid and inhibits the expression of PLML. The antisense oligonuclectide and chimeric oligonuclectide. The antisense oligonuclectide comprises at least one modified internucleoside linkage, preferably a phosphorothicate linkage. It also comprises at least one modified sugar moiety, preferably a 2'-O-methoxyethyl (2'-MOE) sugar moiety. The antisense oligonuclectide further comprises at least one modified nucleobase, preferably a 5-methylcytosine. The antisense oligonuclectides are useful for the treatment of infection, inflammation, and tumours. The present sequence represents a human PLML target DNA sequence for an antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New antisense oligonucleotides encoding phospholemman-like protein expressed in breast tumors (FLML), useful for diagnosing, preventing or treating diseases associated with PLML, e.g. infection, inflammation or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

```
The invention relates to SAC1 polypeptides and the polymucleotides concains a variation associated with encoding them. The polymucleotides contain a variation associated with census carbohydrates, other sweeteners or ethanol. The invention also relates to a method for analysing a biomolecule in a biological sample, comprising altering SAC1 activity in the sample and measuring the certivity, a method for analysing a polymuclecule in a biological sample, comprising contacting a polymuclectide in a biological sample, comprising contacting a polymuclectide in a biological sample, comprising contacting a polymuclectide in a biological sample, comprising contacting the hybridisation complex, a method of identifying susceptibility to obesity or diabetes comprising comparing of identifying susceptibility to obesity or diabetes comprising comparing the mucleotide sequence of the suspected SAC1 allele with a wild type cand the wild-type sequence identifies a sequence variation of the SAC1 conclocide sequence, and a method of treating or preventing obesity, candinal that carries an altered SAC1 allele. The methods and compositions of administering to a subject a pharmaceutical composition and a transgenic animal that carries an altered SAC1 allele. The methods and compositions consumption therapies and for identifying sweeteners and alcohols. This consumption therapies and for identifying sweeteners and alcohols. This invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotides for sensing carbohydrates, other sweeteners, or ethanol, useful for screening drugs for inhibition or restoration of gene function as antidiabetic, antiobesity or antialcohol consumption

An new IL-1 receptor antagonist includes the sequence given in AAR91360. The complete icIL-1rall is given in AAT15099. The protein is expressed by
                                                                                                                                                                         - by amplification of mRNA followed
                                                                                                                                                                                                                                                         A method for the analysis of cDNA comprises (a) preparing an aggregate of double-stranded cDNAs by using an aggregate of mRNAs and a plural type of ababiled reverse transcription primers (GENESEQ files AAQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Intracellular IL-1 receptor antagonist; icIL-1ra; secreted IL-1 receptor antagonist; sIL-1ra; interleukin; IL-1a; IL-1B; auto-immune disease; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAQ74642-Q74676 are partial Aspergillus aculeatus xylanase DNA sequences, one or more of which can form part of a DNA sequence that encodes an enzyme with xylanase activity. The xylanase enzyme degrades plant cell wall components and reduces the viscosity of plant cell wall derived material. These properties are useful in the production of dough and baked products; in the preparation of feed, food, beer, wine, pulp and paper; and for the separation of cereal components. It can also be used in the production of antibodies. (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New xylanase enzymes from Aspergillus aculeatus - used for degrading plant cell wall components, e.g. in the prepn. of feed, in baking and in prepn. of pulp or paper.

Brevibacterium lactofermentum alpha-Ketoglutaric acid dehydrogenase (KGDH) gene, to form pHSG-gdh. The alpha-KGDH gene is derived from L-glutamic acid producing Coryneform bacteria. L-glutamic producing Coryneform bacteria are useful in producing I-glutamic acid. Coryneform bacteria are useful in producing ability lead to the production of L-lyaine producing ability lead to the production of L-lyaine. (Revised entry submitted to correct sequence analysis breakdown.) (Updated on 25-MAR-2003 to correct PN field.)
DNA similar to that encoding the known receptor inhibitor icIL-1ra, but having a 63 bp insert between the first icIL-1ra specific exon and the internal acceptor site of the first exon of sIL-1ra. Oligomucleotides IRA4 and IRA5 (AATIS100) were used in icIL-1raII amplification. They specifically recognise the extra exon. Human B-actin primers (AATIS101-TIS102) were used as a control in amplification. (Updated on 25-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                               Coryneform bacteria;

The agammaglobulinaemia tyrosine kinase (ATK) gene is involved in sex-
linked agammaglobulinaemia (XLA). DNA fragments of the ATK gene (AAT44527
-37) are useful for analysis and diagnosis of XLA carriers and for gene
therapy. AAT44544-45 were used to amplify DNA fragment 4 (AAT44530)
                                                                                                                                                                                                                                                                                                    agammaglobulinaemia; tyrosine kinase; sex-linked; analysis; gene therapy;

                                                                                                                                                                The primer pair AAT17995/96 was used for the PCR amplification of the Brevibacterium lactofermentum gdh gene, which can be used in a claimed method for the prodn. of L-Lye and L-Glu by fermentation. The method comprises culturing a mutant strain, derived from a Coryneform L-Glu producing bacterium with a temp. sensitive mutation with respect to biotin antagonists, which is able to produce L-Lye and L-Glu in the absence of biotin antagonists in a medium contg. excess biotin, and collecting the accumulated L-Lye and L-Glu. The biotin utilisation antagonist is pref. polyoxyethylene sorbitan monopalmitate

AAT47264-T47280 represent capped RNA molecules produced by the method of the invention is for producing capped RNA or RNA analogues. The method comprises reacting a RNA or analogue oligonucleotide with a phosphate addition agent to form a RNA or analogue mono-, di- or triphosphate, which is then capped. The presence of the cap its important for mRNA maturation, initiation of translation, and protects the mRNA against various RNAses present in the cell. The capped RNA or analogue is an influenza endonuclease aptamer, useful for treating or are substrates for virally encoded endonuclease associated with influenza virus. The short non-extendible (due to their length or because of the inhibitors of the cleavage of capped RNA molecules are pocent inhibitors of the cleavage of capped RNA by influenza endonuclease. They may be used to investigate viral and cellular mechanisms of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Generation of infectious clones of RNA viruses - comprising producing recombinant nucleic acid containing at least one full length DNA copy or in vitro transcribed RNA copy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PRRSV; porcine reproductive respiratory syndrome virus; Lelystad virus; Infectious clone; vaccine; diagnostic assay; PCR; primer; anchorprimer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gape
                                                                                                                                                Production of capped RNA or analogues - useful as substrates for influenza virus associated virally encoded endonuclease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

Dy translecting a nost cell with the virus; (3) a recombinant nucleic acid where the combinant nucleic acid comprising an infectious clone obtainable by (1) or (2); (4) a recombinant nucleic acid molecule according to (3) in which a nucleic acid sequence encoding a virulence marker and/or a serological marker has been modified; (5) a recombinant nucleic acid molecule according to (3) in which one open reading frame is substituted by an ORF7 of the Arteriviridae; (6) a recombinant nucleic acid molecule of (3) in which at least one additional heterologous nucleic acid molecule of (3) in which at least one additional heterologous nucleic acid sequence is inserted; (7) a recombinant nucleic acid molecule of (3) in which an open reading frame has been modified; (8) a modified RNA virus of (3). (9) a modified RNA virus of (9). The modified RNA-virus of (8) is used as a vaccine and the protein or antigen of (10) may be used in diagnostic assaws. The present sequence represents Lelystad virus primer 39070R, which is a sense primer corresponding to nucleotides 14566-14585 of the
                                                                                                                                                                                                                                           The invention relates to infectious clones of RNA viruses and vaccines and diagnostic assays derived thereof. The following are claimed: (1) generating an infectious clone based on the genome of a positive-strand RNA virus, comprising producing a recombinant nucleic acid comprising at least one full-length DNA copy or in vitro-transcribed RNA copy or a derivative of either where the RNA virus has a genome of at least about 15 kb; (2) generating an infectious clone based on the genome of an RNA virus, comprising producing a recombinant nucleic acid comprising at derivative of either and further comprising selecting infectious clones by transfecting a host cell with the recombinant nucleic acid where the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 20 BP; 5 A; 4 C; 6 G; 5 T; 0 U; 0 Other;

WPI; 2000-053100/04. Spriggs MK;

ö This sequence represents a PCR primer for DNA encoding the human semaphorin protein, designated DCSema, of the invention. DCSema is used for treating inflammatory disease, of the invention. DCSema is used that treating inflammatory disease.

For treating inflammatory disease, including bind with VESPR of enhance or promote inteleukin. 2 (IL-12) production which induces an ismume response against aggressive micrometastasising tumours. They are associated with immune suppression of mature dendritic cells and therefore can be used for treating autoimmune disorders. They can be employed to measure biological activity of any semaphorin receptor in terms of its binding affinity for semaphorin ligand and also for detecting semaphorin receptor by in vitro assays. DCSema polypeptides are used as reasentch tool for studies (to monitor shelf life and stability of semaphorin receptor under different conditions). They are also used as a research tool for studying the role of this ligand and its receptor in immune regulation and are also used as carriers for The present sequence is provided in a specification relating to a DNA sequence which activates transcription of human high affinity immunoglobulin (Ig)E receptor (Ec-epsilonRI) alpha-chain gene. It may be used for inhibiting the activation of transcription relating to USF-1 or JSF-2. The DNA contains the sequence tggggagcagctggggtaggaac, or cagctg. delivering diagnostic or therapeutic agents to cells expressing semaphorin receptor. They are shown to play a role as immune regulators Human, transcription activation, immunoglobulin E; IgE; IgE receptor, Fc-epsilonRI; USF-1; USF-2; allergy; beta-actin; PCR primer; ss. Gaps DNA having a transcription activating region of a gene, used for developing an agent for preventing and treating allergic diseases Novel neurologic regulator polypeptide for treating inflammatory diseases, autoimmune disorders, etc.,. ö 0.7%; Score 15.2; DB 1; Length 20; 85.0%; Pred.                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is one of a number of antisense compounds of up to phosphoenol pyruvate carboxykinase-cytosolic (PEPCK-cytosolic). The antisense compounds are useful for inhibiting the expression of percentisense compounds are useful for inhibiting the expression of PEPCK-cytosolic in cells or tissues. They are commonly used as research reagents and in diagnostics, e.g. to elucidate the function of particular genes. They are also useful for distinguishing between functions of various members of a biological pathway and for research use. The dailsense compounds are also useful prophylactically, e.g. to prevent or delay infection, inflammation or tumour formation. The present sequence is a chimeric phosphorothioate oligonucleotide with 2'-MOE wings and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Mouse, antiinflammatory, cytostatic, antisense gene therapy, phosphoenol pyruvate carboxykinase-cytosolic, PEPCK-cytosolic, infection, inflammation, tumour formation, phosphorothioate, ss.
The invention is useful for the development of an agent for preventing and treating allergic diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antisense compound capable of modulating the expression of phosphoenol pyruvate carboxykinase-cytosolic, useful for preventing or delaying infection, inflammation or tumor formation.
                                                                                                                                                                    Gaps
                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mouse PEPCK-cytosolic antisense oligonucleotide ISIS 113325.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0.7%; Score 15.2; DB 1; Length 20;

The invention relates to an isolated variant of a mammal genomic sequence of the gene coding for the translation initiation factor 2 alpha kinase 3 (EIF2AK3). The BIF2AK3 nucleic acid variant is useful for the production of a recombinant or synthetic polypeptide, and for screening compounds capable of modulating EIF2AK3. The nucleic acid is also useful for screening or disposing the diseases cited below. The nucleic acid of may compound is useful as a medicament, particularly for be used as a primer or a probe, for detecting and/or amplifying a nucleic cadi sequence. The compound is useful as a medicament, particularly for preventing and/or treating diabetes and/or pathology related to WRS, e.g. type 1 diabetes, type 2 diabetes, the others forms of diabetes, confeoporosis, arthritis, hepatic dysfunction, neghtopathies or other crenal dysfunction, or mental retardation. The cell the mammal or the collypeptide is useful for studying the expression or the activity of the EIF2AK3 protein and chemical or biochemical compounds, which may be involved in the activity of the EIF2AK3 protein, and chemical or biochemical compounds capable of interacting directly or indirectly with the EIF2AK3 protein, and chamical or biochemical compounds capable of interacting directly with the EIF2AK3 protein, and chamical or biochemical compounds capable of protein. ABK4521-ABK26464 represent human EIF2AK3 coding sequences and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

The present invention describes a method (MI) for designing capture oligonucleotide probes (I) for use on a support to which complementary oligonucleotide probes (II) will hybridise with little mismatch, where (I) have melting temperatures within a narrow range. The method is useful for detecting infectious diseases caused by bacterial infectious agents e.g. Salmonella, Listeria monocytogenes and Haemophilus influenza, fungal infectious agents e.g. Cryptococcus neoforamas, Candida albicans and Aspergillus funigatutus, viruses e.g. T-cell lymphocytotrophis cirus, Epstein-Barr virus and polio virus, and parasitic infectious agents caslected from Onchoverava volvulus, Entemocha histolytica and Dracunclus medinesis. The method is also useful for detecting genetic diseases such as 21 hydroxylase deficiency, Turner Syndrome and obesity defects.

CC medinesis. The method is also useful for detecting genetic diseases such as 21 hydroxylase deficiency, Turner Syndrome and obesity defects.

CC Detecting cancer involving oncogenes, tumour suppressor genes or involved in DNA amplification, recombination or repair, the cancer is specifically associated with a gene selected from BRCA1 gene, pinvolved in DNA amplification, recombination or repair, the cancer is specifically associated with a gene selected from BRCA1 gene, pinvolved is also used for environmental monitoring forensics and the food and feed industry, detecting comprises scanning (using e.g. a scanning electron microscope and infrared microscope) the support at the particular sites and identifying if ligation of the oligonucleotide probe selected represent oligonucleotide sequences used in the exemplification of the harvent invarious. The present invention describes a method (M1) for designing capture oligonucleotide probes (I) for use on a support to which complementary oligonucleotide probes (II) will hybridise with little mismatch, where (I) have melting temperatures within a narrow range. The method is useful for detecting infectious diseases caused by bacterial infectious agents e.g. Cyptococcus neoformans, Candida albicars, fungal infectious agents e.g. Cyptococcus neoformans, Candida albicans and Appergillus funigatutus, viruses e.g. T-cell lymphocytotrophis cirus, Epstein-Barr virus and polio virus, and parasitic infectious agents conclovera volvulus, Entamoeba histolytica and bracunculus capted from Onchovera volvulus, Entamoeba histolytica and bracunculus capted from Onchovera volvulus, Entamoeba histolytica and bracunculus concerting cancer involving oncogenes, tumour suppressor genes, or genes involved in DNA amplification, replication, recombination or repair, the cancer is specifically associated with a gene selected from ERCA1 gene, pinvolved in DNA amplification, replication, recombination or repair, the cancer is specifically associated with a gene selected from ERCA1 gene, pinvolved in DNA amplification and la and liver cancers. The method is also used for environmental monitoring, forensics and the food and feed industry, detecting comprises scanning (using e.g. a scanning electron microscope and infrared microscope) the support at the computer of presence or absence of the target nucleotide sequences. ABIS2074 to present oligonucleotide sequences used in the exemplification of the oligonucleotide probestices in the support and the exemplification. of the present invention

The present invention relates to novel double stranded (ds) DNA sequences which can interact with a third strand to form a stable triple helix. The invention also relates to a method for purifying a ds DNA molecule, comprising contact with a third DNA strand that interacts with a target sequence (TS) in the ds DNA to form a triple helix. To illustrate the invention, an oligonucleocide from human FGF1 gene (ARQB1003) was used as the ds DNA sequence is one such third strand that can bind to ARQB1003 to form a triple helix. FGF1 is Fibroblast Growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                   Purifying double-stranded DNA, useful e.g. for isolating plasmids or therapeutic genes, by triple helix formation with oligonucleotide directed to a specific target sequence.
                                                                                                                       Fibroblast Growth Factor 1, FGF1, binding oligonucleotide #1.

Li Y, Sar Tang L, WO200285308-A2 Ното варіелв. 31-OCT-2002 ubiquinone Miller S, Nyce JW, 

first active agent comprising an oligonuclectide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antisinfammatory servoid and ubiquinone. A composition of the invention has antiinflammatory, antiallargic, antiasthmatic, hypotensive, composition and servoid in a unisense gene therapy. The composition is useful for treating or preventing the prophylactic or therapeutic respiratory effect of an autificflammatory steroid in a subject, for reducing levels of for enhancing the prophylactic or therapeutic respiratory effect of an autificflammatory steroid in a subject, for reducing levels of denosine receptor, producing bronchodilation, increasing levels of adenosine creceptor, producing bronchodilation, increasing levels of whiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO The invention relates to a novel pharmaceutical composition, which has a ftp.wipo.int/pub/published\_pct\_sequences

```
This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating comprising oligonucleotides, effective for alleviating bronchoconstruction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, coligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that composites: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiatemental, conditions antialistered cortainers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiatemental, conditions and cytostatic activity, is a beta-adreneyic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered or reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or bronchoconstriction and/or lung with a disease or condition such as pulmonary vascocnstriction, condition such as pulmonary vascocnaticion, condition such as pulmonary vascocnaticion, condition such as pulmonary vascocnaticion, condition such as pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to prevent any unwanted effects due to it
beta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; 88; primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              oligonucleotide containing less percentage of adenosine, targeted unucleic acids associated with lung airway or lung dysfunction, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pharmaceutical composition for treating asthma, has antisense
                                                                                                                                                                                                                                                                                                                                                                                                                           Katz E, Pabalan J,

The ivnention relates to a recombinant yeast cell (I) of a species that does not naturally accumulate pyruvate, comprising at least one exogenous D-lactate dehydrogenase (D-LDH) gene integrated into its genome, where the D-lactate dehydrogenase gene is operatively linked to a functional promoter and terminator sequences. The nucleotide sequence encodes a D-lactate dehydrogenase protein from Lactobacillus helveticus, L. CC lactate dehydrogenase protein from Lactobacillus helveticus, L. D- D-LDH gene is integrated at the locus of a deleted pDC saccharomyces (I) exhibits reduced pyruvcate decarboxylase (PDC) continuity. The D-LDH gene is integrated at the locus of a deleted pDC gene. (I) is useful for fermenting a carbohydrate to lactic acid. The above methods further involve converting at least a portion of the lactic acid to lactide, and polymerizing the lactide to form a polylactide polymer. The present sequence represents a PCR primer for verifying the integration of a L. helveticus D-LDH gene fragment into the genome of K. marxianus CD21. Human glucocorticoid receptor-specific antisense oligonucleotide #1618. kecombinant yeast cell of species that does not naturally accumulate pyruvate, comprising exogenous D-lactate dehydrogenase gene integrated into its genome.                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                    The invention comprises an antisense oligonucleotides that are targeted antisense acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOB) wings and a phosphorothioate backbone.
                                                                                                                                                                                                    New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antisense oligonucleotide; glucocorticoid receptor; infection; infilammation; tumour formation; diabetes; obesity; cardiour formation; hyperlipidemia; Cushing's syndrome; human; ss; phosphorothioate backbone; 2'-methoxyethyl; 2'-MOB.

The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothioate backbone.
                                                                                                                                  New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       wew compounds, particularly antisense oligonucleotides targeted to a nucleic acid encoding PPP3CB, useful for treating an autoimmune disorder, or Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an antisense oligonucleotide targeted to a nucleic acid encoding the human PPP3CB polypeptide and inhibits expression of the PPP3CB polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage, i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2'-0-methoxyethyl sugar moiety, or at least one modified nucleobase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human, PPP3CB; ss, antisense oligonucleotide; phosphorothioate linkage;
2'-O-methoxyethyl sugar moiety; 5-methylcytosine; autoimmune disorder;
Alzheimer's disease; immunosuppressive; nootropic; neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The antisense oligonucleotide comprises at least one modified internucleoside linkage, i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2'-O-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense oligonucleotides are useful for inhibiting expression of the PPP3CB polypeptide and in preparation of a composition for treating autoimmune disorders or Alzheimer's disease. This sequence represents an antisense oligonucleotide target region of
comprising a 5-methylcytosine. The antisense oligonucleotides are useful for inhibiting expression of the PPP3CB polypeptide and in preparation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New compounds, particularly antisense oligonucleotides targeted to a
nucleic acid encoding PPP3CB, useful for treating an autoimmune disorder,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; PPP3CB; ss; antisense oligonucleotide; phosphorothioate linkage;
2'-O-methoxyethyl sugar moiety; 5-methylcytosine; autoimmune disorder;
Alzheimer's disease; immunosuppressive; nootropic; neuroprotective.
                                                                         composition for treating autoimmune disorders or Alzheimer's disease.
                                                                                                          This sequence represents an antisense oligonucleotide of the invention.
                                                                                                                                                                                                                                                                                                                            Gaps

This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LRH1) and splice variants thereof. Specifically, it refers to compositions 8-30 nucleobases in length that target a portion of an active site on the nucleic acid molecule encoding LRH1 (also known as NRSA2). LRH1 is a monomeric orphan nuclear receptor protein that functions as a tissue specific transcription factor. The present invention describes antisense oligonucleotides that comprise at least one modified internucleoside linkage, a phosphorochhoare linkage, at least one modified sugar moiety, a 2'-0-methoxyethyl (2' MOE) and at least one modified nucleobase, a 5-methylcytidine. These antisense compounds are useful for treating or diagnosing a disease associated with LRH1, such as breast cancer, dyslipidaemia, atherosclerosis, low HDL (high density lipoprotein), high LDL (low density lipoprotein), high LDL (low density lipoprotein),
                                                                                                                          human; 88; liver related homologue-1; LRH1; NR5A2; antisense; homophorotchioate; 2' MOS; breast cancer; dyalipladaemia; atherosclerosis; low HDL; high density lipoprotein; high LDL; hypercholesterolaemia; gall stone; triglyceridaemia; obesity; hepatitis; atone; carcinoma; aromatase; cytostatic; antilipaemic; antiarteriosclerotic; anorectic; hepatotropic; litholytic; antiinflammatory; virucidal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          16. .20

triglyceridaemia, obesity, hepatitis B virus-mediated acute or chronic hepatitis, as well as hepatocellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit cytostatic, antilipaemic, antiartriosclerotic, anorectic, hepatotropic, litholytic, antinflammatory and virucidal activities. This oligonucleotide sequence is an antisense DNA oligo used to modulate the expression of the human LRH1 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense oligonucleotides targeted to a nucleic acid encoding liver related homologue-1 (LRH1), useful for treating breast cancer, dyslipidemia, atherosclerosis, hypercholesterolemia, or hepatitis.

This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LRH1) and splice variants thereof. Specifically, it refers to compositions 8-30 nucleobases in clarification of an active site on the nucleic acid modern that target a portion of an active site on the nucleic acid molecule encoding LRH1 (also known as NR5A2). LRH1 is a monomeric orphan unclear receptor protein that functions as a tissue specific cranscription factor. The present invention describes antisense cranscription factor. The present invention describes antisense conjamoncleotides that comprise at least one modified sugar moiety, a 2'-0-methoxyethyl (2' MDE) and at least one modified sugar moiety, a 2'-0-methoxyethyl (2' MDE) and at least one modified sugar moiety, a 2'-0-methoxyethyl (2' MDE) and at least one modified sugar moiety, a 2'-0-methoxyethyl (2' MDE) and at least one of internucleobase, a 5-methylcytidine. These antisense compounds are useful for treating or diagnosing a disease associated with LRH1, such as best cracer, displaced at the activity at 1 interpretation and a condition associated with aromatase activity. Accordingly, these compositions exhibit chepatitis, as well as hepatocellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit litholytic, antilipammatory and virucidal activities. This oligonucleotide sequence is an antisense DNA oligo used to modulate the expression of the human LRH1 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          human, 88; liver related homologue-1, LRH1; NR5A2; antisense; phosphorothioate; 2' MOE; breast cancer; dyslipidaemia; atherosclerosis; low HDL; high density lipoprotein; high LDL; hypercholesterolaemia; gall stone; triglyceridaemia; obesity; hepatitis; hepatocellular carcinoma; aromatese; cytostatic; antilipaemic; antiarteriosclerotic; anorectic; hepatotropic; litholytic;

                                                                                                                                                                                                                                                                                                              This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LRH1) and splice variants thereof. Specifically, it refers to compositions 8-30 nucleobases in length that target a portion of an active site on the nucleic acid molecule encoding LRH1 (also known as NR5A2). LRH1 is a monomeric orphan nuclear receptor protein that functions as a tissue specific cranscription factor. The present invention describes antisense coligonucleotides that comprise at least one modified internucleoside linkage, a phosphorothiate linkage, at least one modified underboase, a 2-0-methoxyethy1 (2' MDE) and at least one modified nucleobase, a 2-0-methoxyethy1 (2' MDE) and at least one modified nucleobase, a 5-methoxyethy1 (2' MDE) and at least one modified nucleobase, a 5-methoxyethy1 (2' MDE) and at least one modified nucleobase, a 5-methoxyethy1 (2' MDE) and at least one modified nucleobase, a 5-methoxyethy1 (2' MDE) and at least one modified nucleobase, a 5-methoxyethy1 (2' MDE) and at least one modified nucleobase, a 5-methoxyethy1 (3) Mpercholesterolaemia, gall stones, triglyceridaemia, obesity, hepatitis b virus-mediated acute or chronic hepatitis, as well as hepaticellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                       New antisense oligonucleotides targeted to a nucleic acid encoding liver related homologue-1 (LRH1), useful for treating breast cancer, dyslipidemia, atherosclerosis, hypercholesterolemia, or hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cytostatic, antilipaemic, antiarteriosclerotic, anorectic, hepatotropic, litholytic, antiinflammatory and virucidal activities. This oligonucleotide sequence is an antisense DNA oligo used to modulate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         OncoseqX; diagnosis; prognosis; cancer; tumour; carcinoma; sarcoma; blastoma; lymphoma; leukaemia; neoplastic disease; hyperproliferative disorder; Gardner's syndrome; hereditary exostosis; polyendocrine adenomatosis; Peutz-Jeghers syndrome; hereditary exostosis; peutofibromatosis of Von Recklinghausen; medullary thyroid carcinoma; pheochromocytoma; retinoblastoma; carctid body tumour; cutaneous melanocarcinoma; intraocular melanocarcinoma; xeroderma pigmentosum; ataxia telangiactasia; chediak-Higashi syndrome; albinism; Panconi's aplastic anaemia; Bloom's syndrome; gene therapy;

The present invention provides isolated polypeptides designated oncoseqX and their encoding polymucleotides. The invention is useful for diagnosing, prognosing and developing a therapeutic strategy for the pathology which includes cancer, tumour, carcinoma, sarcoma, blastoma, lymphoma, leukaemia and neoplastic disease. The invention is also useful for treating hyperproliferative disorders; Gardner's syndrome, hereditary exostosis, polyendocrine adenomatosis, Peutz-Jeghers syndrome, amyloid production and pheochromocytoma, retinoblastoma, carcinoma with amyloid production and pheochromocytoma, retinoblastoma, carcinoma with tumour, cutaneous melanocarcinoma, intraocular melanocarcinoma, xeroderma pigmentosum, ataxia telangiectasia, Chediak-Higashi syndrome, albinism, parconi, a splastic ansemia and Bloom's syndrome. The invention is also useful in gene therapy. The present sequence is a PCR primer used to amplify latent TGP-beta binding protein DNA. The primer is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated Oncoseq polypeptide, useful for developing therapeutic strategy for pathology such as squamous cell carcinoma and fields associated with oncogenesis and tumor progression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADL26942/c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 173
```

```
The invention relates to a recombinant yeast cell of a species that does not naturally accumulate pyruvate. The yeast cell comprises at least one excepenous D-lactate dehydrogenase (D-LDH) gene integrated into its genome, where the D-LDH gene is operatively linked to functional promoter and terminator sequences. The yeast cell which has reduced pyruvate decarboxylase (PDC) activity are useful for producing lactic acid used in producing lactide, cyclic anhydride of two lactic acid molecules. The present sequence is Lactobacillus helveticus D-LDH gene specific PCR primer. This sequence is used in the exemplification of the invention.
                                                                                                                                                         Novel recombinant yeast cell that does not naturally accumulate pyruvate and comprises exogenous D-lactate dehydrogenase gene integrated into the genome and operatively linked to promoter and terminator, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           se; antidiabetic; immunosuppressive; cardiovascular; antilipemic; antiarteriosclerotic; hepatotropic; litholyric; anorectic; neuroprotective; vasotropic; antisense; gene therapy; Farnesoid X receptor; diabetes; immunological disorder; cardiovascular disorder; dyslipidemia; atherosclerosis; high density lipoprotein; low density lipoprotein; hypercholesterolemia; gallstones; hypertriglyceridemia; obesity; neurological disorder; ischemia; reperfusion; diagnostics; prophylaxis.

```
The invention relates to an antisense compound 8-30 nucleobases in length targeted to a nucleic acid molecule encoding Farnesoid X receptor (FXR), where the antisense compound specifically hybridizes with and inhibits the expression of FXR. The composition and methods are useful for inhibiting the expression of FXR (Farnesoid X receptor) in cells or tissues, or for treating diseases or conditions associated with FXR, such as diabetes, immunological disorders, candivosacular disorders, e.g. dyslipidemia and its symptoms, atherosclerosis, low HDL (high density lipoprotein), elevated LDL (low density lipoprotein) or hypercholesterolemia, gallstones, hypertriglyceridemia, obesity, neurological disorders, or ischemial/reperfusion injury. In addition, the composition is used for diagnostics, prophylaxis, or as research reagents or kits. This sequence corresponds to an antisense oligonucleotide of the
New antisense oligonucleotides useful for modulating expression of Farnesoid X Receptor (FXR) or for treating diseases associated with FXR, e.g. diabetes, immunological disorders, cardiovascular disorders,

The antisense compound specifically hybridises with and inhibits the expression of ACS1. The antisense oligomuclectides or compounds are useful for inhibiting the expression of acyl-coenzyme A synthetase 1 (ACS1), and for treating diseases or conditions associated with abstrant expression of ACS1, e.g. diabetes, obesity, metabolic syndrome X, cardiovascular disorder or cancer. The antisense compounds are also useful as research reagents and kits, or in diagnostic, therapeutic and prophylactic applications, e.g. to prevent or delay infection, inflammation or tumour formation. The present sequence represents an acyl-coenzyme A synthetase 1, ACS1, antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New antisense compounds targeted to nucleic acid molecules encoding acyl-coenzyme A synthetase 1 (ACS1), useful for treating diseases or conditions associated with aberrant expression of ACS1, e.g. diabetes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
